ESG REPORT 2021

LEADING ON ESG MATTERS AT EDP

Key Highlights

2021 saw an unprecedented global movement of net zero commitments by countries, cities, regions, businesses and investors. While COP26 confirmed "code red for humanity" amidst the IPCC¹'s starkest assessment ever, it also kept to the objective to limit the global temperature rise to 1.5°C.

The energy transition emerged as the greatest challenge of our time, with the High-Level Dialogue on Energy (UN HLDE) convened in September by the UN Secretary General. The IEA Net Zero Report signaled a very narrow pathway to fulfill net zero, combining renewables, electrification and energy efficiency with adequate policies and further technological innovation. Greater collaboration and action are needed from entire ecosystems, across business, supply chain, governments and civil society.

We revised our business strategy (BP 2021-25) which now comprises ambitious ESG targets focused on leading the energy transition, protecting the environment, delivering a positive impact on society and maintaining strong governance.

We committed €24 bn of further investment in the energy transition and we are set to become coal free by 2025 (zero contribution of coal to our revenues by 2025 year-end). Furthermore, we plan to be "All Green" (100% renewables in our portfolio), and carbon neutral by 2030 (reducing our scope 1 and 2 emissions by 98%).

This year we continued to work with our partners and relevant business networks, including the UN, UN Global Compact, WBCSD, The Climate Group, We Mean Business, SEforALL, on collective projects and initiatives to further advance those topics.

EDP continues to lead from the front as recognized from global indexes –we were ranked as the most sustainable electricity company in the world by the Dow Jones Sustainability Index² and yet again recognized as one of the most ethical companies in the world by the Ethisphere Institute.

¹ Intergovernmental Panel on Climate Change

² <https://www.spglobal.com/spdji/en/indices/esg/dow-jones-sustainability-world-index/#overview>

³ Science Based Targets Initiative

⁴ <https://www.bloomberg.com/gei/>

In April, we also became part of the S&P Global Clean Energy Index.

Environment

Our CO₂ emission reduction targets were recognized by The Science Based Target Initiative (SBTi) as in line with climate science requirements towards limiting global warming to 1.5°C.

In 2021, we reached 19.6 GW of renewable installed capacity corresponding to 80% of our total capacity. We also achieved 51% reductions in our scope 1 and 2 CO₂ specific emissions, and 30% reductions in our scope 3 CO₂ emissions, compared to 2015 levels. We continued to improve our energy efficiency products and services by offering decentralized PV solutions, electric charging points for E-mobility and helping companies capture opportunities powered by digitalization and technological advancements. Moreover, we continue to reduce our specific emissions throughout the years, with 2021 figure being strongly penalized by the hydro crisis in Brazil, which prompted a high utilization rate of Pecém thermal plant, dispatched by the Brazilian electricity system operator. Nevertheless we reiterate our commitment to achieve ~100 gCO₂/kWh in 2025.

In 2022, we will step up efforts to reduce scope 3 emissions in accordance with the latest scientific data, aligned with the recent SBTi³ Net Zero Standard.

Social

Our sustainability strategy is framed, by the UN's Sustainable Development Goals and is anchored on detailed policies and commitments. We continue to contribute to SDG7 - Access to Affordable, Reliable, Sustainable and Modern Energy for All. In addition to our "All Green" goal, we committed to closing all coal-fired power plants in Iberia by 2025 while seeking to support workers and communities.

We are also contributing to a greener future in regions affected by coal phase out through new investments aligned with the energy transition, namely green hydrogen.

EDP also started a program to ensure the engagement of direct suppliers with the goals of decarbonization, transparency and equality, while maintaining the objectives of guaranteeing respect and protection of fundamental human and labour rights. In 2021, despite our best efforts, we still faced 7 fatalities with contractors' workers. We deeply regret these fatalities and loss, and we continue to work hard to achieving zero occupational accidents, reinforced by the launch of the "PlayitSafe" program.

Further, we are also addressing the vulnerability of people and communities, through contributions to reducing energy poverty and investments in access to energy projects, mainly in Africa, having committed €22.5M until 2025.

Governance

In 2021, we also took steps to further streamline our governance structure, reaching 40% and 38% women representation at Executive Board of Directors (EBD) and General Supervisory Board levels, respectively, and making further efforts in the transparency of gender data reporting. We intend to continue leading by example and were pleased to once again be recognised by the Bloomberg Gender Equality Index⁴. EDP also renewed its EBD' Remuneration Policy, reinforcing ESG metrics on variable components.

Revenues aligned with the EU Taxonomy increased to 63% as we continue to accelerate growth and invest in the Energy Transition, with total Gross Investments increasing by 4% YoY, amounting to 3.9 billion euros in 2021, 95% of which in Renewables and Networks.

Renewables represented 75% of electricity generated by EDP in 2021, as we continue to ramp-up renewables deployment, with 2.6 GW of wind and solar capacity added in the last 12 months.

Specific CO₂ emissions increase in 2021 is related to the increase of production in Pecém in Brazil, due to adverse hydrology in the Northeast of Brazil in this period, given that Brazil is experiencing the worst in hydrology crisis for the past 91 years.

Total waste decreased by 7% YoY, mainly explained by the reduction in activity in Portugal, due to Sines shutdown. This led to a total reduction of waste sent to final destination and also to a reduction in the volume of by-products.

Accident Frequency rate increased to 1.79 in 2021 (+3% YoY), in a very unfortunate year, in particular within our service providers. EDP continues determined to strengthen the culture of Occupational Health and Safety, having started in 2021 a new program, "Playitsafe", to raise awareness of the importance of building and adopting safe habits at EDP.

In 2021, **females representation stood at 27% of EDP's workforce** representing 2p.p. increase versus 2021.

○ Sustainable Finance Disclosure Regulation (SFDR) Indicator

1. Above the high performing norm, including results of surveys done to more than 875,000 employees in 50 high performing organizations and is based on company financial performance and engagement and enablement scores. 2. Number of accidents at work with absence/fatalities, per million hours worked (including employees and contractors);

3. Applicable to Board of Directors and top management; 4. >= 740; 5. Includes DJSI, FTSE4Good, MSCI and Sustainalytics.

EDP is a partner within a consortium which is working on a R&D project called ATLANTIS. The project aims at fostering the use of robotic assets in the offshore wind energy supply chain, by demonstrating their benefits in terms of improving the efficiency of O&M activities by reducing their cost while de-risking interventions. ATLANTIS technologies allow for more accurate and faster activities with consequent lower downtimes and loss of profitability. The development and integration of the ATLANTIS' approach into operating offshore wind farms could bring a general reduction of O&M costs up to 10% and consequently a LCoE reduction estimated in the range of up to 2%. EDP will coordinate the demonstrations in Windfloat Atlantic wind farm. Mooring lines and the structure will be inspected by the ATLANTIS robots to detect cracks and defects which represent one of the major concerns and which nowadays are spotted by divers.

1. Changes in scope of reporting limits comparability; 2. 2020 Conventional Generation (PT & SP); 2021 Generation (PT & SP), EDPR & EDP Brasil; 3. Excluding Brazil in 2020; 4. Net of disinvestments;

For more information on EDP's sustainability performance please visit our [website](#)

For more information on on indicators please visit our [online glossary](#)

1. The comparable peers exclude companies that manage transmission grids, only includes the ones that handle throughout the electricity value chain and electricity/gas supply. S&P ranking is considering the members' companies of DJSI World and Europe; 2. The ESG Risk Rating measures a company's exposure to industry-specific material ESG risks and how well a company is managing those risks (opposed to a score). This rating distinguishes five levels ranging from 100 (Severe) to 0 (Negligible). EDP is considered to have a medium level of risk.

For further information please visit our [sustainability report](#) and our [ESG DAY](#) page available in our [website](#)

As regulation evolves, we will continue to be proactive in the adoption of the most recognized reporting standards. The indicators included in this report are selected based on their relevance to investor communities and our business operations. For more sustainability information please see full-year EDP Sustainability report [here](#).

Our annual sustainability report follows other voluntary regulatory reporting frameworks, namely the Task Force on Climate-related Financial Disclosures (TCFD), the Sustainability Accounting Standards Board (SASB) and the Portuguese Securities Market Commission (CMVM).
