

# Net Zero action plan

## Our levers

**Produce all electricity from renewable sources**

**Phase out remaining thermal generation**

**Reduce distribution power losses in our distribution networks**

**Reduce supply chain emissions**

**Phase out remaining thermal generation**

**Minimize Natural Gas retail emissions**

## Our actions

- With a Business Plan focused exclusively on Renewable Energy Sources and Networks, EDP invests in renewable and storage capacity and in innovative solutions, such as hybridisation of solar, wind and hydro, smart grids, etc.

- Zero capital investment in new carbon-intensive assets
- All green generation by 2030

- Through asset renewal, grid optimization investment, digitalization, and innovation
- 100% smart meters already installed in Iberia in 2024 and 70% coverage in Brazil until 2026.

- Through green procurement and support to suppliers' decarbonization path

- Zero capital investment in new carbon-intensive assets
- All green generation by 2030

- Developing and delivering low carbon solutions for clients (e.g., solar DG and Energy Communities, electrification solutions for industrial clients)
