

Carpenter Wind Farm

Jasper County, Indiana

⚡ Installed capacity: **196 MW**

🏠 Estimated commercial operation: **2025**

🏠 Generation would be equivalent to the average consumption of more than **55,500 Indiana homes**.¹

Carpenter Wind Farm would be located in Jasper County, Indiana, outside of the town of Remington. The wind farm would complement the area's sprawling corn and soybean fields, providing local farmers with a stable, drought-resistant cash crop in the form of landowner lease payments. In addition to landowner payments, Carpenter Wind Farm would generate millions of dollars in payments to local governments through the life of the project, benefiting schools, fire departments, and the township and county.

Economic benefits

\$365 million
CAPITAL INVESTMENT²

\$38 million
WOULD BE PAID TO LOCAL
GOVERNMENTS

\$70 million
WOULD BE PAID TO LANDOWNERS

Millions of dollars
WOULD BE SPENT LOCALLY

PERMANENT JOBS³
10 – 14 jobs would be created

CONSTRUCTION JOBS³
150 – 200 jobs would be created

Energy security

Power generated at Carpenter would support the state of Indiana's electric grid. The wind farm would also contribute to the **energy security for the United States**, helping diversify domestic supply.

Wind energy and land use

Wind turbines have a limited footprint, **leaving 98 percent of the project's leased land undisturbed** and available for farming, wildlife habitat, ranching, or recreation.⁴

Wind energy supports American manufacturing

More than 450 American factories produce parts and materials for the U.S. wind industry, which **employs more than 130,000 Americans**.⁵

Carpenter's environmental impact

The wind farm would save more than **355 million gallons** of water each year and would prevent the air pollution that causes smog and acid rain.⁶

EDPR NA's impact in North America from wind energy⁷

How wind energy works

EDPR NA uses wind turbines to harness the natural resource of wind to generate mechanical energy. This energy is transformed into electricity via a generator and is sent to the electrical grid after being converted to the proper voltage.

Power grid

Wind is one of the cheapest forms of energy.⁸

Wind energy provides at least a quarter of the electricity produced in eight states.⁹

Local experience with EDPR NA

“ I think that EDPR fits well in our town. They're so gracious to come on board with our community, work with us, and help us to keep that small town, big heart alive.”

Pam H., Resident, Chalmers, Indiana

¹Power generation calculated using a 35% capacity factor. Household consumption based on the 2024 EIA Household Data monthly average consumption by state.

²Assumes the average cost of an installed wind farm is \$1.4 million/MW for projects built after 2018, \$1.6 million/MW for projects built in 2017, \$1.7 million/MW for projects built between 2012 and 2016, and \$2.2 million/MW for projects built before 2012. Based on U.S. DOE 2018 Wind Technologies Market Report, U.S. DOE 2017 Wind Technologies Market Report, and U.S. DOE 2015 Wind Technologies Market Report.

³Full-time equivalent jobs calculated by dividing number of contractor hours worked during construction by 2080.

⁴American Clean Power Association, Wildlife and Wind Power Facts, 2021.

⁵American Clean Power Association, Wind Power Facts, 2024.

⁶Assumes 0.58 gallons of water consumed per kWh of conventional electricity from Lee, Han, & Elgowainy, 2016.

⁷Based on EDP Renewables North America's Operational Wind Farms through 2024.

⁸Lazard's Levelized Cost of Energy 2024 (version 17.0)

About us

EDPR Renewables North America LLC (EDPR NA), its affiliates, and its subsidiaries develop, construct, own, and operate wind farms and solar parks throughout North America. Headquartered in Houston, Texas, with 61 wind farms, 26 solar parks, and eight regional offices across North America, EDPR NA has developed more than 12,000 megawatts (MW) and operates more than 11,400 MW of onshore utility-scale renewable energy projects. With more than 1,000 employees, EDPR NA's highly qualified team has a proven capacity to execute projects across the continent.
