Teays River Wind Farm

Blackford County, Indiana

Installed capacity: **200 MW**

Estimated commercial operation: **2028**

Generation will be equivalent to the average consumption of more than **58,000 Indiana homes**.[1]

Teays River Wind Farm will be located in Blackford County, Indiana, just east of Hartford City. The wind farm will complement the area's sprawling corn and soybean fields, providing local farmers with a stable, drought-resistant cash crop in the form of landowner lease payments. In addition to landowner payments, Teays River Wind Farm will generate millions of dollars in payments to local governments through the life of the project, benefiting schools, fire departments, and the township and county.

Economic benefits

$356 million
CAPITAL INVESTMENT[2]

Millions of dollars
WILL BE PAID TO LOCAL GOVERNMENTS

Millions of dollars
WILL BE PAID TO LANDOWNERS

Millions of dollars
WILL BE SPENT LOCALLY

PERMANENT JOBS[3]
8 – 10 jobs will be created

CONSTRUCTION JOBS[3]
200+ jobs will be created

Energy security

Power generated at Teays River will support the state of Indiana's electric grid. The wind farm will also contribute to the **energy security for the United States**, helping diversify domestic supply.

Wind energy and land use

Wind turbines have a limited footprint, **leaving 98 percent of the project's leased land undisturbed** and available for farming, wildlife habitat, ranching, or recreation.[4]

Wind energy supports American manufacturing

More than 450 American factories produce parts and materials for the U.S. wind industry, which **employs more than 130,000 Americans**.[5]

All economic data reflects the estimated amount throughout the life of the project.

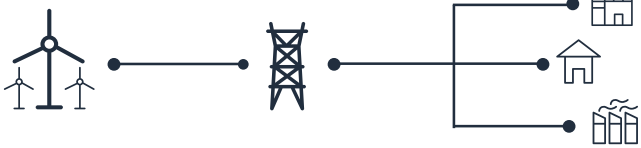
Teays River's environmental impact

The wind farm will save more than **355 million gallons** of water each year and will prevent the air pollution that causes smog and acid rain.[6]

How wind energy works

EDPR NA uses wind turbines to harness the natural resource of wind to generate mechanical energy. This energy is transformed into electricity via a generator and is sent to the electrical grid after being converted to the proper voltage.

Power grid



Wind is one of the cheapest forms of energy.[8]

Wind energy provides at least a quarter of the electricity produced in eight states.[9]

EDPR NA's impact in North America from wind energy[7]

$575+ million PAID TO LANDOWNERS

$558+ million PAID TO LOCAL GOVERNMENTS

7,400 CONSTRUCTION JOBS CREATED

610+ PERMANENT JOBS CREATED

Local experience with EDPR NA

"I think that EDPR fits well in our town. They're so gracious to come on board with our community, work with us, and help us to keep that small town, big heart alive."

Pam H., community member, Indiana

[1] Power generation calculated using a 35% capacity factor. Household consumption based on the 2023 EIA Household Data monthly average consumption by state.

[2] Assumes the average cost of an installed wind farm is $1.4 million/MW for projects built after 2018, $1.6 million/MW for projects built in 2017, $1.7 million/MW for projects built between 2012 and 2016, and $2.2 million/MW for projects built before 2012. Based on U.S. DOE 2018 Wind Technologies Market Report, U.S. DOE 2017 Wind Technologies Market Report, and U.S. DOE 2015 Wind Technologies Market Report.

[3] Full-time equivalent jobs calculated by dividing number of contractor hours worked during construction by 2080.

About us

EDP Renewables North America LLC (EDPR NA), its affiliates, and its subsidiaries develop, construct, own, and operate wind farms and solar parks throughout North America. Headquartered in Houston, Texas, with 61 wind farms, 26 solar parks, and eight regional offices across North America, EDPR NA has developed more than 12,000 megawatts (MW) and operates more than 11,400 MW of onshore utility-scale renewable energy projects. With more than 1,000 employees, EDPR NA's highly qualified team has a proven capacity to execute projects across the continent.
