

Powering America

EDP Renewables North America (EDPR NA) is advancing U.S. energy leadership with reliable, domestic power—strengthening energy independence and creating economic opportunity across the country.

 **11.5 GW**
OPERATING IN THE USA

 Powering the equivalent of **3.1 million American homes**.¹

 Saving more than **17 billion gallons of water** annually and improving air quality.²

 Preserving American farmland and ecosystems.

 Strengthening national energy security and diversifying domestic power supply.

Local energy, local benefits

 **\$3 billion**
Total economic impact³

 **\$566 million**
Revenue to local governments⁴

 **\$603 million**
Payments to landowners⁵

Investing in America's energy workforce

EDPR NA's renewable energy projects advance U.S. manufacturing and support high-quality jobs across the energy sector in the communities we serve. From development and construction through long-term operations, our projects are powered by American energy, heart, and drive—growing local economies and building a more resilient energy future.

10,600+ jobs created
Across construction
& operations⁶

EDPR NA's Impact in North America⁸

Total operating capacity
12,100+ MW

Total renewable energy sites
90

Equivalent homes powered
3.3+ million

American jobs
12,700+

Total capital investment
\$16.8+ billion

Annual state & local
government payments
\$567 million

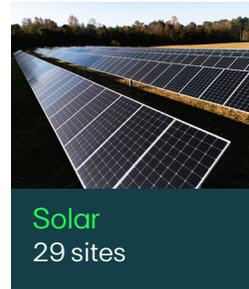

Annual lease payments
to landowners
\$608 million

Our technologies

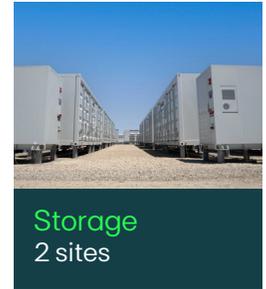

With more than 1,000 employees, our highly qualified team has a proven track record of delivering clean energy projects across North America, helping diversify domestic energy supply in Canada, the United States, and Mexico.

Wind
61 sites

Solar
29 sites

Storage
2 sites

Over the last decade, wind and solar costs have fallen 31% and 46%, making them the most affordable new electricity sources in the majority of the U.S.⁹

Local experience with EDPR NA

The quote has been edited for clarity and brevity.

“Renewables are helping strengthen America in so many ways. By taking advantage of the natural resources we have here in the U.S., we’re reducing our reliance on foreign sources of energy. We can turn those resources into local energy dispersed at the local level.”

Brent Bailey, Former Public Service Commissioner, Mississippi

¹Power generation calculated using a 35% capacity factor for wind and solar power generation is based on power generation calculated using a 25% capacity factor. Household consumption based on the 2024 EIA Household Data monthly average consumption by state.

²Assumes 0.58 gallons of water consumed per kWh of conventional electricity from Lee, Han, & Elgowainy, 2016.

³Includes vendor spending, property taxes, and landowner payments of all operational projects through 2024.

⁴Cumulative local government payments through 2024.

⁵Cumulative landowner payments through 2024.

⁶Full-time equivalent jobs calculated by dividing number of contractor hours worked during construction by 2080.
