Disclaimer

This document has been prepared by EDP, S.A. (the Company) solely for use at the presentation to be made on this date and its purpose is merely of informative nature and, as such, it may be amended and supplemented and it should be read as a summary of the matters addressed or contained herein. By attending the meeting where this presentation is made, or by reading the presentation slides, you acknowledge and agree to be bound by the following limitations and restrictions.

This presentation may not be distributed to the press or to any other person in any jurisdiction, and may not be reproduced in any form, in whole or in part for any other purpose without the express and prior consent in writing of the Company.

This presentation and all materials, documents and information used therein or distributed to investors in the context of this presentation do not constitute or form part of and should not be construed as, an offer (public or private) to sell or issue or the solicitation of an offer (public or private) to buy or acquire securities of the Company or any of its affiliates or subsidiaries in any jurisdiction or an inducement to enter into investment activity in any jurisdiction.

Neither this presentation nor any materials, documents and information used therein or distributed to investors in the context of this presentation or any part thereof, nor the fact of its distribution, shall form the basis of, or be relied on in connection with, any contract or commitment or investment decision whatsoever and may not be used in the future in connection with any offer (public or private) in relation to securities issued by the Company.

Any decision to invest in any securities of the Company or any of its affiliates or subsidiaries in any offering (public or private) should be made solely on the basis of the information to be contained in the relevant prospectus, key investor information or final offering memorandum provided to the investors and to be published in due course in relation to any such offering and/or public information on the Company or any of its affiliates or subsidiaries available in the market.

Matters discussed in this presentation may constitute forward-looking statements. Forward-looking statements are statements other than in respect of historical facts. The words “believe,” “expect,” “anticipate,” “intends,” “estimate,” “will,” “may”, continue, “should” and similar expressions usually identify forward-looking statements.

Forward-looking statements include statements regarding: objectives, goals, strategies, outlook and growth prospects; future plans, events or performance and potential for future growth; liquidity, capital resources and capital expenditures; economic outlook and industry trends; energy demand and supply;

developments of the Company’s markets; the impact of legal and regulatory initiatives; and the strength of the Company’s competitors. The forward-looking statements in this presentation are based upon various assumptions, many of which are based, in turn, upon further assumptions, including without limitation, management’s examination of historical operating trends, data contained in the Company’s records and other data available from third parties. Although the Company believes that these assumptions were reasonable when made, these assumptions are inherently subject to significant known and unknown risks, uncertainties, contingencies and other important factors which are difficult or impossible to predict and are beyond its control. Important factors that may lead to significant differences between the actual results and the statements of expectations about future events or results include the company’s business strategy, financial strategy, national and international economic conditions, technology, legal and regulatory conditions, public service industry developments, hydrological conditions, cost of raw materials, financial market conditions, uncertainty of the results of future operations, plans, objectives, expectations and intentions, among others. Such risks, uncertainties, contingencies and other important factors could cause the actual results, performance or achievements of the Company or industry results to differ materially from those results expressed or implied in this presentation by such forward-looking statements.

The information, opinions and forward-looking statements contained in this presentation speak only as at the date of this presentation, and are subject to change without notice unless required by applicable law. The Company and its respective directors, representatives, employees and/or advisors do not intend to, and expressly disclaim any duty, undertaking or obligation to, make or disseminate any supplement, amendment, update or revision to any of the information, opinions or forward-looking statements contained in this presentation to reflect any change in events, conditions or circumstances.

Recurring EBITDA²
(€m)

Recurring Net Profit
(€m)

€399 m -9% vs 1Q25

Net Debt
(€Bn)

€15.7 Bn +2% vs 4Q25

Recurring net income of EDP in the first quarter of 2026 decreased by 9% year-on-year, to €399 million, reflecting the YoY decline of electricity prices in Iberia.

Recurring EBITDA fell 3% YoY (or -1% ex-forex) to €1.4 billion. Electricity networks EBITDA increased 9% to €438 million, driven by a +16% increase in Iberian networks, due to higher investment in the new regulatory periods that have just started this quarter, while EBITDA from networks in Brazil remained stable in euro terms. EDP Renewables EBITDA increased by +2% (or +10% ex-forex, namely due to the 11% depreciation of the USD vs. the Euro), supported by the increase of average installed capacity (+9%), concentrated in US, and operational efficiency improvements. FlexGen & Clients EBITDA fell by 15%, due to lower electricity prices and higher ancillary services costs supported to supply final electricity clients, despite strong hydro generation and an increase in electricity volumes supplied (+7% vs 1Q25).

Net operating costs fell 4% YoY in recurring terms, reflecting the focus on operational efficiency. Net financial costs increased by 7%, reaching €253 million, impacted by a 20bps increase of avg. cost of debt to 5.1% (or 3.4% excluding BRL denominated debt).

Net debt amounted to €15.7 billion, reflecting the execution of the investment plan, organic cash flow in the period and the appreciation of BRL vs. the Euro in the period. Annual cash dividend payment of €0.9bn is occurring in 2Q while 2026 asset rotation and tax equity transactions proceeds are expected to be more concentrated in the second half of the year.

¹ Including Wind, Solar, Hydro and mini-hydro capacity;

² Excluding one-off impacts as per page 7 (EBITDA) and page 9 (Net profit)

Recurring EBITDA 1Q26 by Business Segment

Recurring EBITDA 1Q26 by Geography

¹ Includes the contribution from Celesc.

² Restatement of 1Q25 values.

³ Adjustments for one-off impacts, described below (*).

EBITDA Recurring in 1Q26 decreased –3% YoY to €1,382m, reflecting a weaker performance in the integrated business following the extraordinary FlexGen contribution in 2025. This was partially offset by stronger revenues at Iberia Networks, driven by higher investment at the start of the new regulatory period, while EDPR contributed positively to balance the overall result. Excluding forex, recurring EBITDA remained practically unchanged with a slight decrease of 1%.

By business segment

Electricity Networks (32% of recurring EBITDA, €438m in 1Q26)

- **Recurring EBITDA increased +9% YoY, mainly driven by Iberia (+16%) supported by higher RAB and increased rate of return**, following the start of the new regulatory period. In Brazil, EBITDA remained broadly flat despite the negative impact from the VNR adjustment and the sale of Lote 21, supported by improved market conditions, lower energy losses in electricity distribution, and the start of construction of new transmission lines.

Renewables, Clients & EM (68% of recurring EBITDA, €934m in 1Q26)

- **Wind, Solar & BESS (EDPR) – recurring EBITDA increased +2% to €489m in 1Q26** supported by portfolio growth specially in US and stronger resources in some regions partially offset by lower realised prices in some markets and USD depreciation.
- **FlexGen & Clients Iberia – recurring EBITDA in 1Q26 decreased –18% YoY to €397m** mainly due to: (i) lower selling prices on uncontracted volumes, with electricity pool price in Iberia decreasing from €85.3/MWh in 1Q25 to €44.2/MWh in 1Q26, and (ii) lower flexibility contribution, with higher contribution from thermal increasing the sourcing cost of ancillary services for retail, despite the support from very strong hydro resources (IPH at 1.52 vs 1.42; reservoirs at 94% vs 88%).
- **FlexGen & Clients Brazil – recurring EBITDA increased +11% YoY reaching €49m in 1Q26**, mainly due to PLD upside, partially offset by lower GSF increasing spot purchases.

By geography

- **North America impacted positively EBITDA with a slight increase of +1% YoY** impacted by depreciation of USD (ex-fx +11%), excluding that positive performance of the top-line due to higher generation resulting from new additions, partially offset by lower resource compared to 1Q25.
 - **Iberia recurring EBITDA decreased –10% YoY to €748m**, reflecting lower realised prices and lower flexibility contribution despite strong hydro resources.
 - **Europe exc. Iberia recurring EBITDA increased +21% YoY** supported by higher average MW in operations and +€5m additional asset rotation gains from Greece transaction.
 - **South America recurring EBITDA increased +6% YoY to €240m**, supported by higher electricity prices and new wind and solar capacity additions, despite stable and resilient network performance in Brazil.
 - **APAC recurring EBITDA increased to €20m** supported by growth of the asset portfolio, disciplined operations and maintenance (availability at 99%) and efficiency improvements.
- * **Non-recurring adjustments in 1Q26:** –€7m from HR restructuring. **In 1Q25:** –€4m from HR restructuring.

1.2. Profit & Loss Items below EBITDA

Recurring Net Profit	399	439	-9%	-41	439	312	222	306	399	-9%	-41

¹ Includes unwinding of medium, long term liabilities (TEIs, IFRS-16, dismantling & decommissioning provision for generation assets, concessions) and interest on medical care and pension fund liabilities.

Depreciation, Amortisation & Impairments increased +5% YoY to €503m, driven by net capacity additions of the period. In recurring terms, excluding €21m of one-offs mainly driven by Kristin storm related write-offs and impairments (€16m) and Meadow Lake IV repowering accelerated depreciation (€1m), depreciation and amortisation increased 4% YoY to €483m. In 1Q25, one-offs totalled €17m mainly related to Meadow Lake IV repowering accelerated depreciation (€13m).

Financial results increased +7% YoY to €253m in 1Q26, mainly explained by the increase in net financial interest and lower capitalized financial costs. This was partially offset by a lower impact from foreign exchange and derivatives. With no non-recurring items, recurring net financial interest also increased 7% YoY. The average cost of debt increased from 4.9% in 1Q25 to 5.1% in 1Q26, strongly impacted by the higher weight of BRL-denominated debt. Excluding Brazil, cost of debt slightly increased, from 3.3% in 1Q25 to 3.4% in 1Q26.

Income taxes decreased -€41m to €138m, following a -13% YoY decrease in pre-tax profit, on the back of lower EBITDA although partially offset by higher Depreciation and Amortization and higher net financial results. The effective tax rate decreased from 25% in 1Q25 to 22% in 1Q26 mainly due to geographic mix.

Non-controlling interests increased to €63m in 1Q26 from €57m, including: (i) €45m related to EDPR – impacted by the sale of a 49% stake of 2 US portfolios and (ii) €10m related to EDP Brasil (details on page 26).

Net profit decreased -12% YoY to €378m in 1Q26 following EBITDA downside, higher depreciation and amortization and higher financial costs. Excluding non-recurring items, net profit decreased -9% YoY to €399m in 1Q26, mostly impacted by lower prices at the FlexGen & Client segment, mitigated by strong performance from EDPR and electricity networks.

*** Adjustments and non-recurring items impact at net profit level: In 1Q26 -€21m**, associated with the following one-offs: HR restructuring costs (-€5m), Meadow Lake accelerated depreciation (-€1m), Kristin storm related write-offs and impairments (-€11m) and other impairments (-€4m). **In 1Q25 -€11m**, associated with the following one-offs: HR restructuring costs (-€2m) and Meadow Lake IV repowering accelerated depreciation (-€9m).

1.3. Investment Activity

Capex (€ million)	1Q26	1Q25	Δ %	Δ Abs.	1Q25	2Q25	3Q25	4Q25	1Q26

Consolidated Capex	653	877	-26%	-224	877	823	863	1,099	653

 **95%** of Gross Investments in the Energy Transition

Gross investments decreased 21% YoY to €0.7bn (-€0.2bn), with a clear divergence by segment:

- Renewables, Clients & EM and Other (~55% of total): lower investment, reflecting slower execution and stricter capital allocation.
- Networks (~39% of total): ~+40% YoY growth, the main driver within capex, supported by progress in Brazilian transmission projects and higher capex in Iberia with the beginning of a new regulatory periods.
- Financial investments (~6% of total): limited and broadly stable (mainly focused on EDPR and Ocean Winds).

Net cash investments fell to €615m (-48% YoY; -€0.6bn), mainly driven by lower capex (-26%) and higher asset rotation proceeds, following the sale of a 150 MW wind portfolio of EDPR in Greece.

Net Cash Investments (€ million)	1Q26	1Q25	Δ %	Δ Abs.

USD/EUR	1.15	1.18	-2%	+0.03
BRL/EUR	6.01	6.44	-7%	+0.43

¹ Excluding Regulatory Receivables.

Net Debt Evolution in 1Q26

Organic cash flow in 1Q26 decreased -16% YoY, to €631m, mainly driven by a working capital downside – on the impact of the extreme weather events that occurred in Portugal and other temporary impacts – and slightly lower EBITDA. Organic cash flow translates the cash generated and available to fulfil EDP’s key strategic pillars of sustainable growth, controlling financial leverage and shareholder remuneration.

Net cash investments decreased -48% YoY, to €615m, in 1Q26, reflecting lower gross investments, in line with the stricter investment policy and focus in core low-risk markets, higher proceeds from asset rotation and lower payables to fixed assets suppliers reflecting a YoY slowdown of construction activity.

Change in Regulatory Receivables amounted to -€116m, +€27m YoY, mainly explained by differences observed between the actual electricity wholesale price vs. the regulator's assumptions.

Change in Foreign exchange rates had a negative impact of €0.2 Bn on net debt, reflecting essentially the 11% devaluation of the US Dollar vs. the Euro in the period.

Overall, net debt increased by +€0.3 Bn in 1Q26, to €15.7 Bn, as of March 2026.

Key ratios	Mar-26	Dec-25
Net Debt/EBITDA ⁴	3.4x	3.3x
FFO / Net Debt	20.5%	20.9%

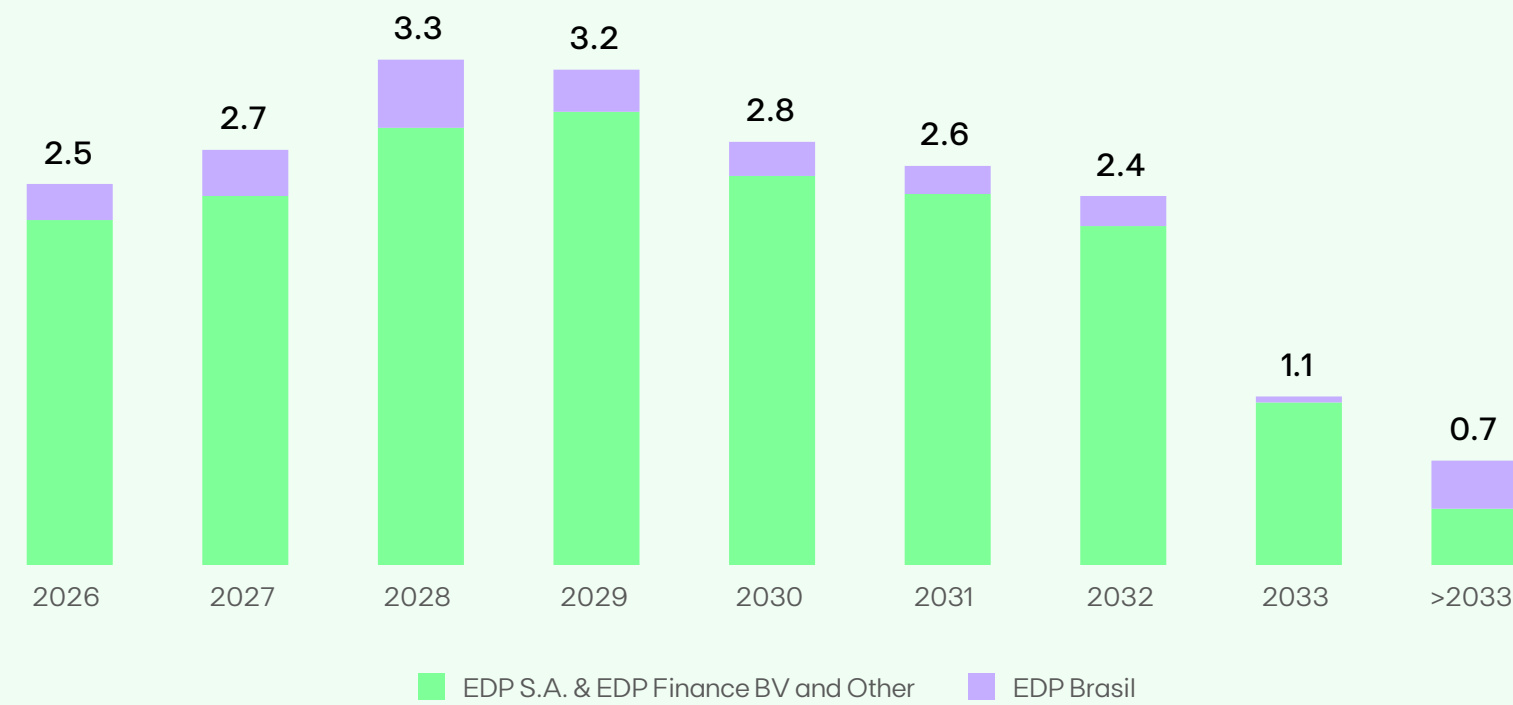

¹ Nominal Value including 100% of the hybrid bonds. Considers hybrid bonds at reset date.

² Derivatives designated for fair-value hedge of debt including accrued interest.

³ Commercial Paper.

⁴ Net of regulatory receivables; Net debt excluding 50% of hybrid bond issues (including interest); Based on trailing 12 months recurring EBITDA (considering normalization of the asset rotation gains) and net debt includes operating leases (IFRS-16).

Debt maturity (€ billion) as of Mar-26¹

Debt by Interest Rate Type as of Mar-26¹

Debt by Currency as of Mar-26^{1;2}

EDP's financial debt is mostly issued at holding level (EDP S.A., EDP Finance B.V. and EDP SFE), accounting for 82% of the Group's Nominal Financial Debt. Debt for the Group is raised mostly through debt capital markets (84%), with the remaining being raised through bank loans and commercial paper. **As of today, green bonds correspond to 83% (or €14.9 Bn) of total bonds outstanding, while sustainable debt also represents 83% of total financial debt.**

Regarding the most recent rating actions: In May-25, Fitch affirmed EDP's rating at "BBB" with stable outlook, while noting an improved credit headroom, supported by a resilient business profile with strong visibility on renewables growth and contracted/regulated earnings. In April-26, Moody's affirmed EDP's rating at "Baa2" with stable outlook, reflecting EDP's continued commitment to robust financial metrics, a diversified business mix and high share of regulated and contracted earnings. In Dec-25, S&P affirmed EDP's rating at "BBB" with stable outlook, reflecting EDP's reiterated commitment to a sound financial profile.

Looking at the last 12 months major debt maturities and early repayments:

- In Apr-25, maturity of a €750m bond outstanding, with a coupon of 2.000%.
- In Jul-25, early redemption of the €750m subordinated hybrid green debt instruments, with a coupon of 1.700%.
- In Oct-25, maturity of a €600m bond outstanding, with a coupon of 1.875%.
- In Dec-25, cash tender offer of €499m of a subordinated hybrid green debt instruments, with a coupon of 5.943%.
- In Jan-26, maturity of a €750m bond outstanding, with a coupon of 1.625%.

In the last 12 months, EDP completed the following operation:

- In May-25, €750m subordinated hybrid green debt instruments issue, with a coupon of 4.500% and maturity in May-55.
- In Aug-25, €500m senior green debt instruments issue, with a coupon of 3.125% and maturity in Dec-31.
- In Nov-25, €1,000m subordinated hybrid green debt instruments issue, with a coupon of 4.375% and maturity in Dec-55.
- In Jan-26, €650m senior green debt instruments issue, with a coupon of 3.250% and maturity in Feb-32.

Total cash and available liquidity facilities amounted to €11.3 Bn by Mar-26, of which €7.7 Bn are available credit facilities. This liquidity position allows EDP to cover its refinancing needs until 2028, on a business-as-usual environment.

¹ Nominal Value including 100% of the hybrid bonds. Considers hybrid bonds at reset date.

² After FX derivatives.

Overall, distributed electricity was 24.2 TWh (Details on page 48), a +1% increase YoY, **reflecting the growth in electricity distribution in Portugal (+3% YoY)**, driven by a higher average consumption per customer, a +1% increase in customers connected and higher EV's penetration.

¹ Includes the contribution from Celesc.

² Supplies & Services + Personnel Costs.

³ Net of subsidies. Capex in Portugal includes €2.8m of vehicles acquisition.

⁴ Portugal considers Accounting RAB.

Electricity distribution in Spain decreased -4% YoY, mainly due to the temporary outage of a large industrial client. **Electricity distribution in Brazil increased +1% YoY**, mainly explained by the +2% increase in customers connected and a strong economic activity in our DisCos areas, which was partially offset by the normalization of temperatures and higher penetration of solar DG.

Solid financial performance, with EBITDA increasing +9% YoY, positively impacted by the Electricity Networks business in Iberia – on the back of the beginning of new regulatory periods in both Portugal and Spain, a strict OPEX management and higher RAB.

The electricity Networks business in Brazil continued to showcase a resilient operational and financial performance, with a broadly stable YoY EBITDA. The Distribution business benefited from a strong operational performance and an uplift in economic activity in the DisCos' areas and lower losses. Nevertheless, these were more than compensated by lower YoY inflation, which resulted in the decrease of the inflation-linked component of the businesses' revenue. The Transmission business benefited from the EBITDA of new construction and the acquisition, from CELGPAR in October 2025, of a Transmission lot. These were partially offset by the deconsolidation of Lot 21, following its sale.

Successful operational responsiveness after extreme weather events in Portugal affecting our grids, rapidly replacing damages and restoring energy to our customers, showcasing our commitment with operational excellence, with no material financial impacts for the Group.

We continue to see a strong increase in active connections related to the Energy Transition, +13% YoY in Iberia, mainly on the back of (i) renewable power, (ii) self-consumption and energy communities and (iii) electric mobility points.

The total number of installed smart meters increased 2%, to 8.8 million, across geographies, leveraged by the roll out of smart meters, which has already achieved a 100% penetration in EDP's Iberian Electricity Networks. In Iberia, the volume of telemetered energy is already 100%.

Electricity distribution in Portugal

In 1Q26, **Gross Profit amounted to €321m, a +12% increase YoY**, following the beginning of the new 2026–2029 regulatory period, which benefits from a higher regulatory rate of return on RAB and higher average RAB since day one. The rate of return on RAB was 6.72%, which compares with 5.48% in 1Q25.

OPEX remained broadly unchanged YoY, at €77m, due to a strict OPEX management leading to efficiency savings, despite being mitigated by an increase in O&M costs, namely following extreme weather events in the beginning of the year.

E-Redes' High/Medium-Voltage investment plan (PDIRD) for 2026–30 still awaits approval. In April, the Portuguese Government also announced the 2026–34 Transformation, Recovery and Resilience Plan to support impacts from early-year extreme weather, with financial details expected soon.

¹Last resort supply activities in Portugal are now considered together with the remaining supply activities.

Electricity distribution in Spain

Gross Profit increased by +4%, to €122m, in 1Q26, mainly due to the beginning of the new 2026–2031 regulatory period, which benefits from a higher regulatory rate of return on RAB, from 5.58% to 6.58%, and higher RAB. These were partially offset by the new regulatory period's first year cut on Allowed OPEX.

OPEX increased +5% YoY (+€1m), mainly on the back of higher O&M costs. Overall, **EBITDA increased by +3% to €94m in 1Q26**, benefiting from the increase in Gross Profit, despite the slight increase in OPEX.

The new Royal Decree on Investment Plans, aiming the increase in allowed investment level through 2030, remains under approval process, potentially resulting in an extra allowed investment for EDP above current Investment Plan.

Transmission – Key drivers (€ million)	1Q26	1Q25	Δ %	Δ Abs.
Reg. EBITDA (RAP adj.costs & taxes)	14	36	-60%	-22
Revenues	93	57	+63%	+36
Construction Revenues	86	9	—%	+77
Financial Revenues	16	32	-48%	-15
Other	-10	16	-160%	-26
Gross Profit	35	37	-5%	-2
EBITDA	42	32	+32%	+10
EBIT	40	30	+34%	+10

Two distribution concessions, both 100% owned by EDP Brasil: EDP ES, in Espírito Santo, with a 5-year regulatory period last time renewed in Aug-25; EDP SP, in São Paulo, with a 4-year regulatory period last renewed in Oct-23. The regulatory WAAC is currently defined at 8.03%.

EDP operates at 100% Lots 1, 2 and EDP Goiás, and is developing four other projects: Lots 2, 7 and 13 (awarded from the Auction 1/2024) and Lot 5 (awarded from the Auction 4/2025).

Brazil Networks EBITDA remained broadly flat YoY, reflecting offsetting dynamics across the business. Gross Profit in Distribution decreased by €8m to €178m (-4% YoY), as higher regulated revenues (+€15m), supported by volume growth in Espírito Santo (+2.7%) and lower energy losses (+€6m), were more than offset by a negative VNR impact (-€16m) related to the ES concession renewal. In Transmission, Gross Profit reached €35m (-5% YoY), with higher construction revenues from Lines 02, 07 and 13 offset by the deconsolidation of Lot 21.

Overall, EBITDA was positively impacted by the gain from the CELGPAR acquisition, which more than compensated for the decline in Gross Profit.

2.2. FlexGen & Clients

FlexGen & Clients Iberia

¹ Average of the period.

² Final price reflects spot price and system costs (capacity payment, ancillary services).

³ Includes mini-hydros FIT.

⁴ Special Regime Production, namely wind, solar, and cogeneration.

⁵ Net of pumping.

⁶ 1Q25 values updated as per last info available.

Main Drivers ¹	1Q26	1Q25	Δ %	Δ Abs.
Electricity spot price (Spain), €/MWh	44	85	-48%	-41
Electricity final price (Spain), €/MWh ²	66	101	-34%	-35
Iberian Electricity 1Y Fwd Price (€/MWh)	55	63	-13%	-8
CO2 allowances (US), €/ton	76	73	+5%	+3
Mibgas, €/MWh	40	47	-14%	-7
TTF, €/MWh	40	47	-15%	-7

During 1Q26, electricity demand in Iberia increased 2% vs. the homologous period. Residual thermal demand (RTD), i.e. coal and CCGT generation, increased 13% vs. 1Q25, reflecting mainly the increase in demand and the decrease in nuclear production.

In 1Q26, electricity spot price decreased by 48% YoY, to €44/MWh, driven by a surge in hydro and wind output following successive storms since the end of January, which significantly increased electricity renewable generation. Average electricity final price in Spain decreased -34% YoY, to €66/MWh, mainly reflecting the evolution of the wholesale spot price, mitigated by the increase of the ancillary services & restrictions component.

Hydro Operational Data	1Q26	1Q25	Δ %	Δ Abs.

Gross Profit	560	669	-16%	-109
EBITDA	397	479	-17%	-82
EBIT	328	442	-26%	-114

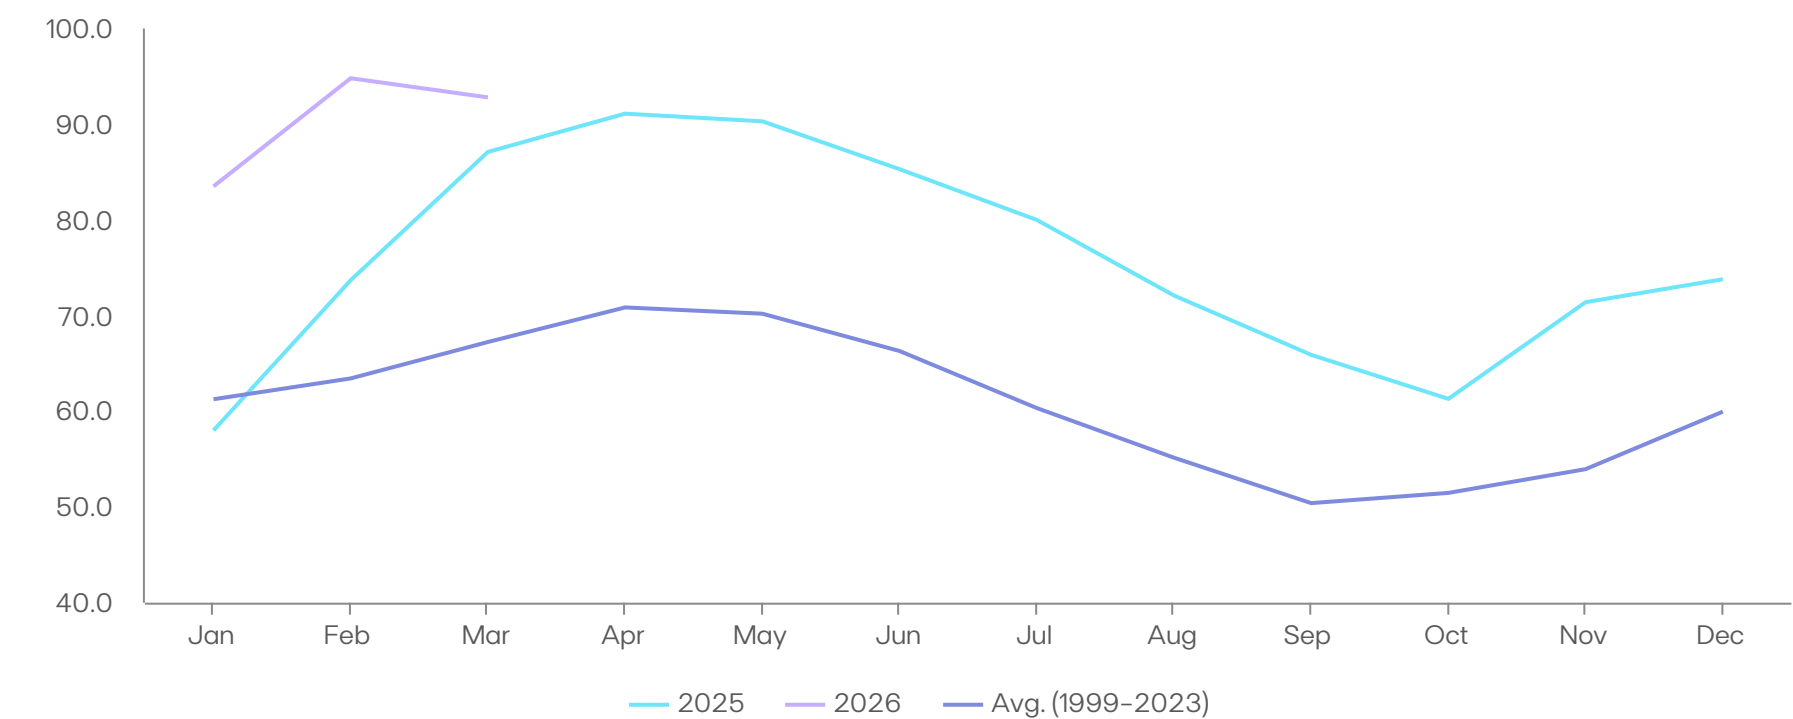

FlexGen & Clients in Iberia EBITDA in 1Q26 remained strong but decreased -17% YoY (-€82m YoY), following an extraordinary 1Q25 (with the combination of higher prices and hydro volumes +42% above average). This performance reflects: i) Hydro volumes +52% above average resulting in lower electricity spot prices in Iberia (-48% YoY) and ii) lower contribution from net flexibility revenues, with higher ancillary services costs in electricity supply to clients combined with hydro pumping generation decreasing -22% YoY, following heavy storms in Portugal, which implied water discharges mainly in January – February. Pumping activity implied a pumping spread with a 70% premium vs. baseload price.

FlexGen & Clients segment in Iberia encompasses 3.8 GW of thermal installed capacity, ~4.2m electricity clients and energy trading activities in Iberia.

² Iberia, including As-a-Service and Build & Transfer installations.

³ Includes Cogeneration

Supply Iberia

Total electricity supplied in 1Q26 increased +7% YoY, mainly driven by the increase YoY in volumes sold in the B2C and B2B segments.

EDP has 4.2 million electricity customers, reflecting a -2% decrease compared to 1Q25, but on a stabilization trend following EDP's competitive commercial offerings, the growing adoption of differentiated services and the continued delivery of high levels of customer service. At the same time, EDP continues to work on increasing penetration of differentiated services (43% penetration rate in 1Q26 an increase of 4.p.p.vs. 1Q25).

EDP keeps growing into new energy solutions involving its clients in the energy transition. As of 1Q26, EDP had 356 MWac of as-a-service distributed solar in clients' facilities in Iberia (13% higher YoY). On electric mobility, EDP increased by 28% the number of public installed electric charging points, reaching 4,207 in 1Q26, with the number of clients with electric mobility solutions increasing +34% YoY.

Coal	27	134	-80%	-107
Other ³	0	5	-100%	-5
Load Factors (%)				
CCGT	26%	23%	+12%	+3
Coal	4%	7%	-46%	-3

Thermal generation & Energy Management Iberia

Electricity production in 1Q26 increased by 4% YoY, driven primarily by combined cycle gas turbines (CCGTs) in Portugal, reflecting higher demand for flexibility and demand for backup services, following temporary outages in Portugal's transmission/interconnection system in February/March, caused by the storms.

Our thermal portfolio in Iberia encompasses 3.8 GW installed capacity, which plays an active role in ensuring the security of electricity supply: 76% in CCGT and 24% in coal.

Overall, EBITDA increased +11% to €49m, with Lajeado & Investco delivering €30m (+15% YoY) and Peixe Angelical improving to €12m (+185% YoY) on more favourable operating conditions.

As part of EDP's risk-controlled approach to its portfolio management, EDP follows a **hedging strategy to mitigate the GSF/PLD risk**, aiming at reducing the volatility of earnings. Thus, supply and generation activities are managed in an integrated way, allowing the optimization of the portfolio as a whole.

In 1Q26, Gross Profit increased +€10m (+23% YoY to €55m), supported by stronger operational performance across the portfolio and the increase in PLD. Joint ventures and associates decreased -1% YoY (€0m) reflecting the of the Cachoeira Caldeirão and Santo Antônio do Jari hydro plants in July 2025.

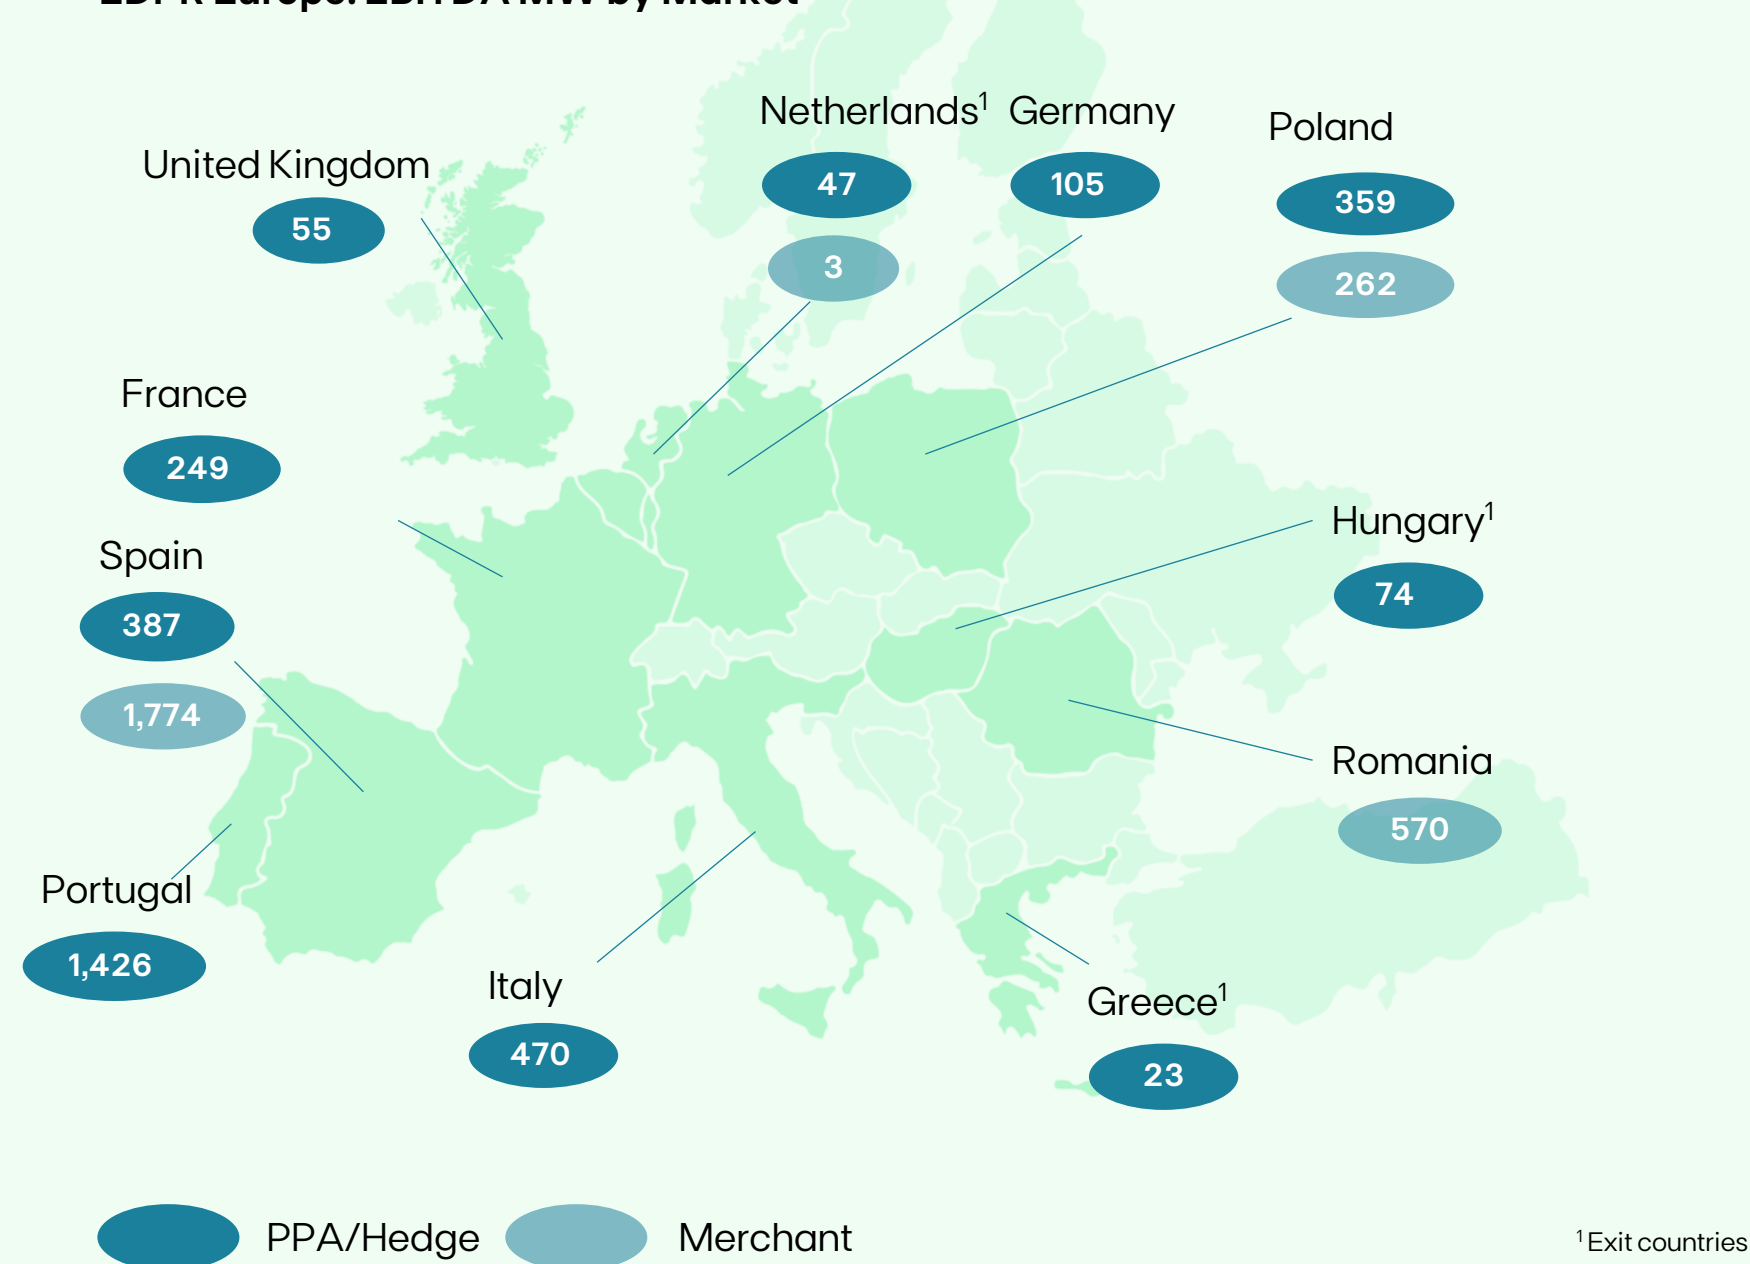

¹For Group segment reporting purposes, Holdings and other activities at EDP Brazil level are distributed across business segments.

²Generation Scale Factor (GSF) reflects the total (real) generation, accounted as a proportion of the total volume of Physical Guarantee in the system (when it has a strong volatility on a quarterly basis).

2.3. EDP Renewables

2.3.1. Europe (EUR)

EDPR Europe: EBITDA MW by Market

Opex ratios	1Q26	1Q25	Δ YoY
Annualized Core Opex/Avg. MW (€/k)	54.7	54.0	+1%

Income Statement (€m)	1Q26	1Q25	Δ YoY
Gross Profit	234	279	-16%
Other operating income	9	6	+50%
Operating Costs	-100	-115	-14%
Supplies and services (S&S)	-64	-56	+14%
Personnel costs (PC)	-12	-19	-30%
Other operating costs	-23	-40	-42%
Share of profit of associates	1	-1	0%

Provisions	—	—	—
Depreciation, amortisation and impairments	-63	-66	-5%
Amortisation of deferred income (gov. grants)	0.2	0.5	-70%
EBIT	81	103	-21%

Gross profit in Europe decreased -16% YoY, resulting from a decrease of -14% YoY in realized prices mainly due to lower pool prices in Iberia, partly mitigated by higher hedging prices YoY. Generation increased 5% YoY supported by strong resources (+3% above LT resources), mainly in Iberia due to successive storms, and higher average MW in operations offset by asset rotation deconsolidation in Spain, Italy and Greece.

Operating costs decreased YoY primarily driven by other operating costs, mainly from tax beneficial measures such as the 7% tax generation in Spain -€3m YoY and -€8m YoY related to clawbacks in Romania.

EBITDA evolution YoY impacted by lower realized prices and deconsolidation of portfolios sold, mitigated by capacity additions and €5m additional asset rotation gains of 150 MW Greece transaction.

Gross profit in South America, increased +39% YoY, driven by higher average MW in operations resulted from new capacity and higher average selling price (+36% YoY) partial offset by lower renewables resources (16% below LT average), resulting in a flat generation YoY.

Operating costs broadly stable with annualized core Opex/Avg MW decreasing 12% YoY due to increase in installed capacity.

EBITDA increased 76% YoY, reflecting efficiency efforts and higher average capacity YoY.

Amortisation of deferred income (gov. grants)	0.1	0.03	+82%
EBIT	6	-3	—

Gross profit in APAC increased 17% YoY, with generation increasing 24% YoY on the back of solar installations in the last 12 months and higher renewable resources 1% above LT average, offset by 4% YoY decrease in average selling price.

Operating costs decreased 12% YoY, reflecting strong effort in cost-control strategy and management focus on efficiency, with annualized core Opex/Avg. MW decreasing 29% YoY.

Overall, **EBITDA** in 1Q26 was €20m with increase mainly due to efficiency improvement. Vietnam provision of €7m registration withstanding lower cash collection from feed-in-tariffs due to the current renewables' regulatory regime.

¹ Scope 2 emissions in accordance with GHG Protocol location-based methodology.

² As-a-service capacity.

³ Includes public, private and charging points installed inside EDP facilities.

Emissions

EDP's scope 1 and 2 GHG emissions decreased –9% YoY mainly reflecting a –10% reduction in Scope 1 emissions, driven by lower stationary combustion emissions, and partially offset by a +3% increase in scope 2 emissions. As a result, Scope 1 & 2 emissions intensity decreased –13% YoY, supported by the reduction in absolute emissions and the continued high share of renewables in the generation mix.

The decrease in scope 1 emissions occurred despite a +4% YoY increase in total electricity generation compared to 1Q25, as 91% of generation continued to come from renewable sources, supporting the overall reduction in emissions. In particular, higher hydro (+4%) and solar (+18%) output, together with a significant decline in coal-fired generation (–80%), contributed positively to this performance.

Scope 2 emissions increased +3% YoY, mainly due to higher emissions associated with distribution power losses. This was driven by a +1.1% increase in energy distributed in the Iberian Peninsula and a +0.8% increase in Brazil.

Despite higher electricity generation (+4% YoY), avoided emissions decreased –3% YoY, as the increase in generation was more than offset by a –7% reduction in the average thermal emission factor, reflecting the cleaner underlying energy mix.

Low carbon portfolio

Revenues from coal are at 0.1%, with the annual decrease mainly due to the plants Aboño I and Los Barrios ceasing operations, and Soto 3 (Soto de Ribera) having limited activity, in line with EDP's commitment to reduce GHG emissions and to have >90% of the electricity generation coming from renewable sources in 2026–28, which is currently at 91%.

Regarding gas, although CCGT generation increased by +12% YoY, reflecting higher demand for system flexibility and backup services, revenues fell by –23% due to a reduction in the implicit unit revenue (from 85 to 59 €/MWh). As a result, revenues from fossil fuels decreased to 2.3% as of 1Q26.

Low carbon solutions

Over the past 12 months, EDP installed 2,800 electric charging points, bringing the total network to 14,575. At the same time, the Group now serves around 165 thousand clients with electric mobility solutions, reflecting the continued expansion of its electric mobility offering and supporting its ambition to play a leading role in the energy transition.

Environmental matters				
Environmental CAPEX	€m	10	20	-49%
Environmental OPEX	€m	52	68	-23%
Environmental fines and penalties	€m	0	0	-

Circularity

In line with its commitment to enhancing circularity across the full life cycle of its assets, EDP has expanded its waste reporting following deeper engagement with service providers, allowing for improved data accuracy and broader coverage, including construction and dismantling phases and additional information from the Electricity Networks business.

Total waste generated increased by ~14 kt year-on-year. Around 87% of this increase is attributable to the expanded reporting scope described above. On a like-for-like basis, excluding scope expansion effects, waste generated in 1Q26 would be ~18.5 kt, broadly in line with the 17 kt from 1Q25.

Most of the additional waste reported is non-hazardous and recoverable, resulting in a +5 pp recovery rate for non-hazardous waste. Regarding the decrease in hazardous waste generated and recovered, it is mainly explained by a 1Q25 one-off of hazardous waste that was previously stored by Brazil, which were recovered.

Water

Changes in freshwater withdrawal and consumption reflect different operational dynamics across assets. Higher freshwater withdrawal was driven by the increased CCGT generation, mainly associated with higher operational activity at the Ribatejo plant since April 2025, while the reduction in freshwater consumption is mainly impacted by the reduced coal generation, mainly due to the reduced operational activity at Soto 3 coal plant over the same period.

Environmental matters

Environmental CAPEX decreased, primarily reflecting lower investments in landscape and biodiversity protection, in line with the decrease in capacity under construction (1.9 GW as of March 2026 vs 2.4 GW as of March 2025). Environmental OPEX also declined, mainly due to lower CO₂ allowance costs, in line with reduced thermal generation.

EDP has faced no environmental fines and penalties in 1Q26 nor in 2025, underscoring the strength of its environmental management approach.

EDP published its Nature Management Approach, reporting in alignment with TNFD for the first time

To reinforce the commitments set out in its Environmental Policy and respond to the growing relevance of nature-related risks and dependencies, EDP has developed its [Nature Management Approach \(NMA\)](#) Report, a group-wide framework that defines how the Company identifies, assesses and manages nature-related dependencies, impacts, risks and opportunities across the full value chain.

Aligned with the recommendations of the **Taskforce on Nature-related Financial Disclosures (TNFD)** and structured around the **LEAP approach**, the NMA establishes a common methodology, language and governance framework for integrating nature considerations into strategy, investment decisions and operations. It translates external expectations and global biodiversity goals into a practical framework that can be consistently applied across geographies, technologies and stages of the project lifecycle, supporting a more systematic and forward-looking management of nature-related issues.

By embedding nature into decision-making alongside climate and other strategic risk dimensions, the NMA enables EDP to move beyond a traditional compliance-driven approach and towards a more integrated view of **impacts, dependencies, physical and transition risks, and opportunities**. This approach also lays the foundation for progressively strengthening metrics, data collection processes and internal capabilities, in line with evolving regulatory requirements and market expectations.

For EDP, protecting and restoring nature is not only fundamental to halting biodiversity loss; it is also a **key enabler of climate resilience, business resilience and effective risk management**. By adopting a structured Nature Management Approach and embracing nature as part of the solution, EDP strengthens its ability to anticipate and manage emerging risks, while reinforcing its commitment to long-term value creation in a future where **healthy ecosystems, climate objectives and sustainable business performance advance together**.

Severity rate ⁴	x	100	56	+79%
EDP employees	x	95	48	+97%
Contractors	x	103	60	+72%

¹ Turnover calculated as: departures/headcount.

² Employees & contractors data, excluding commuting accidents.

³ Frequency rate calculated as [# of Work-related injuries with lost workdays/Hours worked*1,000,000].

⁴ Severity rate calculated as [# of Lost workdays due to work-related injuries/Hours worked*1,000,000].

Our team

The annual variation of employee headcount is a result of the company's regular employee renewal process, coupled with a global reorganisation of the company's structure aimed at streamlining and making operations more efficient.

Nevertheless, EDP was able to maintain a stable turnover and percentage of women, and increase by +1 pp the proportion of women in leadership positions, reflecting the impact of recent internal promotions due to the reorganisation and succession planning.

Training

The percentage of employees receiving training increased +7 pp to 69%, reflecting the completion of previously planned training programs and higher participation rates. Digital training also remained a key focus during the quarter, with more than 3,300 employees completing digital-related training initiatives, supporting progress towards the Group's digital upskilling objectives.

This evolution was also supported by the expansion of short and accessible e-learning programs, which resulted in a decrease in training investment and time per employee.

Health & Safety

In 1Q26, two fatal accidents were recorded – one in Portugal and one in Brazil, both in the Electricity Networks business and both involving contractors. No accidents with serious injuries were recorded, compared to 1 in 1Q25.

The total number of accidents with lost workdays increased +27%, mainly impacted by 9 more incidents involving contractors, from 10 to 19, with the increase being particularly in Electricity Networks. Conversely, there were 3 less accidents involving EDP employees, from 12 to 9.

Consequently, the overall frequency rate increased to 1.7, driven by a +105% rise in the contractors' frequency rate, and partially offset by a -24% decrease in EDP employees' rate. Similarly, the severity rate increased +79% YoY, driven by both contractors and employees, with the latter reflecting the impact of fewer but more severe incidents. Despite these developments, EDP continues to aim for zero serious injuries and fatal (SIF) accidents, supported by the PlayitSafe program, which is fostering a safer working environment across all operations.

Communities	Unit	1Q26	1Q25	Δ
Social impact				
Social investment	€m	4	5	-30%
EDP volunteers	%	2.4%	2.0%	+0.4 pp
Working hours in volunteering	h	1,078	968	+11%

Social impact

Social investment stood at €4 million, with the annual variation mainly reflecting the delayed execution of projects in the first quarter, which resulted in lower investment recognised during the period.

On the other hand, the volunteering initiatives carried out increased, particularly in Portugal, with activities such as the rehabilitation of community centres in partnership with Just a Change, ecological restoration activities with Re-Store Portugal and WWF, and beach clean-up actions with Brigada do Mar, reinforcing EDP's social and environmental commitment at local level.

EDP reinforces global leadership in People and Ethics through external recognitions

In 2026, EDP further strengthened its international positioning by being simultaneously recognised as a Top Employer by the Top Employers Institute and as one of the World's Most Ethical Companies by Ethisphere.

The Top Employer 2026 certification, awarded for the ninth consecutive year, reflects the Group's above-average performance in people management practices, particularly in ethics and integrity, Human Resources management digitalisation and talent development, and now spans 12 markets, with Germany included for the first time.

At the same time, EDP was distinguished for the 15th time by Ethisphere and remains the only Portuguese company featured among the 138 organisations recognised globally in 2026.

Together, these recognitions underline EDP's consistent commitment to a people-centred culture, strong governance and the integration of ethical principles into its long-term strategy and day-to-day operations.

3.3. ESG ratings

ESG achievements recognized by top-tier institutions, aiming to maintain a strong position in ESG ratings performance.
