

Cameron Solar

Calhoun County, South Carolina

⚡ Installed capacity: **20 MW**

🏠 Online since: **2017**

🏠 Homes powered: **3,300 South Carolina homes¹**

Cameron Solar is located approximately 50 miles southeast of Columbia in central South Carolina. Located entirely within Calhoun County, the site complements the area's agricultural resources with a stable, weather-resistant cash crop in the form of landowner lease payments.

Energy security

Power generated at this site will **strengthen South Carolina's electric grid while contributing to broader U.S. energy security** by diversifying domestic power supply.

Solar as a neighbor

Solar projects are designed to **capture light silently and without producing glare**. The vegetation maintained beneath the panels helps mitigate heat.²

Solar panel technology

EDPR NA's solar panels consist of a thin layer of photovoltaic cells sealed on both sides, containing no liquids and **posing no risk to the environment or human health**.

Cameron's environmental impact

This project will conserve over **25 million gallons** of water annually and reduce air pollution linked to smog and acid rain.³

How solar energy works

EDPR NA uses photovoltaic (PV) solar cells, which convert sunlight directly into electricity. The resulting direct-current electricity is then collected, converted to alternating current, adjusted to the proper voltage, and delivered to the electrical grid.

Solar has become one of the most **affordable forms of energy**, with costs falling 71% over the past decade.^{5,6}

Local experience with EDPR NA

“After the solar farm checks started coming in, I purchased more land and started a tree nursery. When you show the lenders this fixed income you have coming in, your credit rating goes up, as well as your borrowing power so you can expand your business and farm.”

Walt P., Landowner, South Carolina

¹ Power generation calculated using a 25% capacity factor. Household consumption based on the 2024 EIA Household Data monthly average consumption by state.

² American Clean Power Association, Solar as a neighbor, 2021.

³ Assumes 0.58 gallons of water consumed per kWh of conventional electricity from Lee, Han, & Elgowainy, 2016.

⁴ Based on EDP Renewables North America's operational solar sites through 2025.

⁵ Lazard's Levelized Cost of Energy 2024 (version 17.0)

⁶ Based on American Clean Power Association's Annual Market Report, 2023.

About us

EDP Renewables North America LLC (EDPR NA), its affiliates, and its subsidiaries develop, construct, own, and operate wind farms and solar parks throughout North America. Headquartered in Houston, Texas, with 61 wind farms, 29 solar parks, and eight regional offices across North America, EDPR NA has developed more than 12,900 megawatts (MW) and operates more than 12,300 MW of onshore utility-scale renewable energy projects. With more than 1,000 employees, EDPR NA's highly qualified team has a proven capacity to execute projects across the continent.
