

Top Crop Wind I & II Repower

Grundy and/or LaSalle Counties, Illinois

- ⚡ Installed capacity: **300 MW**
- 🏠 Commercial operation: **2030**
- 🏠 Homes powered: **106,400 Illinois homes.**¹

Top Crop Wind consists of two phases and harnesses the wind blowing over the Cayuga Ridge into homegrown energy. Located just northwest of Pontiac, the wind site includes parts of Grundy and/or LaSalle counties. The repower of Top Crop Wind will allow the site to continue operating efficiently and effectively well into the future.

Economic benefits

\$500 million
Capital investment

\$55 million
Revenue for landowners

\$66 million
Revenue for public services

Millions of dollars
Local spending

Hundreds of jobs created
Construction

Repowering

Repowering **increases project efficiency and maximizes power generation** in some of the nation's windiest locations—all while working with the same landowners and using existing infrastructure.

Wind energy and land use

Wind turbines have a minimal land footprint, leaving approximately **98% of leased land available** for continued farming, wildlife habitat, ranching, or recreation.²

Wind energy supports American manufacturing

The U.S. wind industry supports a robust domestic supply chain, with **more than 450 factories and over 130,000 American jobs** nationwide.³

Top Crop's environmental impact

This project will conserve **over 533 million gallons** of water annually and reduce air pollution linked to smog and acid rain.⁴

Powering North America with wind energy⁵

2.5 million
Homes powered

\$575+ million
Revenue for landowners

\$558+ million
Revenue for public services

8,000 jobs
Permanent & construction

How wind energy works

EDPR NA uses wind turbines to harness the natural resource of wind to generate mechanical energy. This energy is transformed into electricity via a generator and is sent to the electrical grid after being converted to the proper voltage.

As one of **the most cost-effective energy sources available** today, wind energy already provides at least **25% of electricity generation** in eight U.S. states.^{6,7}

Local experience with EDPR NA

“The income from the wind farm is very stable, as opposed to farming, which is kind of up and down. Actually, a lot of the income that we’ve received has gone back into the land. It’s improved our farmland so we can grow more corn and soybeans.”

John D., landowner and farmer, Illinois

About us

EDP Renewables North America LLC (EDPR NA), its affiliates, and its subsidiaries develop, construct, own, and operate wind farms and solar parks throughout North America. Headquartered in Houston, Texas, with 61 wind farms, 29 solar parks, four energy storage sites, and eight regional offices across North America, EDPR NA has developed more than 12,900 megawatts (MW) and operates more than 12,300 MW of onshore utility-scale renewable energy projects. With more than 1,000 employees, EDPR NA's highly qualified team has a proven capacity to execute projects across the continent.
